

Robot Assets

NVIDIA Isaac Sim supports a wide range of robots with differential bases, form factors, and functions.

These robots can be categorized as wheeled robots, holonomic robots, quadruped robots, robotic manipulator and aerial robots (drones). They can be found in the Isaac Sim Asset Browser in the [Robots](#) folder.

Wheeled Robots

Holonomic Robots

Quadruped Robots

Manipulator Robots

Aerial Robots

Humanoid Robots

Mobile Manipulators

Limo

NVIDIA Isaac Sim supports the AgileX Limo robot with differential drive base with ROS integration.

[Robots/AgilexRobotics/Limo/limo.usd](#)

Limo.

Carter

The NVIDIA Carter robot provides a differential base for navigation-related applications. Nova Carter is the next generation Carter robot, based on the [Nova Orin](#) compute and sensor platform.

The Carter robots are in the [Robots/Carter](#).

`Robots/Carter/carter_v1.usd`

Carter v1.

`Robots/Carter/nova_carter.usd`

Nova Carter.

Clearpath

NVIDIA Isaac Sim supports Clearpath mobile robots, including the Dingo and Jackal. The Clearpath robots are in the `Robots/Clearpath`.

`Robots/Clearpath/Dingo/dingo.usd`

Dingo.

`Robots/Clearpath/Jackal/jackal.usd`

Jackal.

Evobot

The Evobot is a self-balancing robot with a 2-wheel drive, designed to grasp and transport objects. It was developed by Fraunhofer Institute Dortmund.

`Robots/Evobot/EvoBot.usd`

Evobot.

Forklift

The forklift model has a single pivot wheel and rollers. It uses a prismatic joint tied to an Articulation Action to control the lift.

The forklifts are located in `Robots/Forklift`

`Robots/Forklift/forklift_b.usd`

Forklift B.

`Robots/Forklift/forklift_c.usd`

Forklift C.

JetBot

The open-source NVIDIA JetBot AI robot platform gives makers, students, and enthusiasts everything they need to build creative, fun, intelligent AI applications.

The Jetbots are located in `Robots/Jetbot`

[Robots/Jetbot/aws_robomaker_jetbot.usd](#)

JetBot - simplified model.

[Robots/Jetbot/jetbot.usd](#)

JetBot - high-resolution model imported from CAD.

Idealworks iw.hub

Idealworks iw.hub is an mobile base equipped with LIDARs and cameras to enable autonomous navigation, powered by NVIDIA AGX GPU. Capable of carrying payloads of 1,000kg, iw.hub can drive at up to 2.2m/s speeds. The iw.hub robots can be found in

[Robots/Idealworks](#)

- [Robots/Idealworks/iw_hub.usd](#) - Base Version. Has mobile base physics rigged.
- [Robots/Idealworks/iw_hub_sensors.usd](#) - Base Version plus sensors API (Lidar, First and third person navigation camera).
- [Robots/Idealworks/iw_hub_static.usd](#) - Static model with no physics rigged.

iRobot Create 3

The Create3 robot by iRobot is an advanced differential robot designed for a variety of educational applications. It features a circular base with integrated sensors and advanced control capabilities, making it well-suited for indoor navigation, mapping, and

similar tasks. The Create3 robot in NVIDIA Isaac Sim is equipped with a differential drive system and sensors for realistic simulation.

iRobot Create 3.

- The Create 3 robot can be found in `Robots/IRobot/create_3.usd` - Base Version. Has mobile base physics rigged.

Note

For more details, see [iRobot Create 3](#) documentation.

Leatherback

Leatherback is an NVIDIA research platform for autonomous driving.

Leatherback.

The Leatherback robot is located in `Robots/Leatherback/leatherback.usd`
